readyworks

Data center assessment and dependency mapping

Build one clean, trusted view of your data center before you plan a single move. ReadyWorks connects the systems you already run, adds application context, and puts AI to work on the plan.

THE PROBLEM

Most data centers are a black hole of information, and the plan inherits the gaps

Data centers grow over years as managers, engineers, and program teams come and go. Few organizations can say for sure what runs in the data center, who uses it, and how it all connects.

Discovery tools that rely on network scans see part of the picture. Their results have to be combined with systems of record and spreadsheets, then confirmed with application owners. Done by hand, that work holds up every migration, consolidation, and modernization program behind it, and bad data carries straight into the plan.

80%

of large enterprises will run production AI workloads across at least three infrastructure environments by 2029.

57%

of survey respondents said their most recent major outage cost more than $100,000.

Sources: Gartner, October 2026; Uptime Institute, Annual Outage Analysis 2026

THE SOLUTION

ReadyWorks starts with the data

The platform connects vCenter, Nutanix, your CMDB, discovery tools, and other systems of record, and brings in the spreadsheets that hold the rest. Data is accessed on demand, in place, normalized, and continuously cleansed. Application context covers dependencies, usage, compatibility, and lifecycle stage, so your team sees what else a change will touch.

ReadyAI analyzes the estate, recommends targets and wave groupings, and builds the plan. A named delivery team executes, with your sign-off at every phase.

WHAT YOU GET

An assessment you can plan on

- **Faster program starts.** One reconciled inventory replaces the manual data chase before planning begins.
- **Fewer surprises at cutover.** Dependencies are mapped before waves are built, so moves don't break what's connected.
- **Plans built on trusted data.** ReadyAI recommends targets and wave groupings from cleansed, current data for your team to approve.
- **Stakeholders engaged in every change.** Surveys, attestations, self-service scheduling, and timed communications keep stakeholders informed and involved.
- **A full record.** Every action is logged, explainable, and covered by a tamper-evident audit trail.

AI-planned. Expert-delivered.

AI that analyzes, recommends, and plans. Experts who deliver.

WITH READYWORKS

From first inventory to a plan your team approves, with every step on one platform

- Connect discovery tools, your CMDB, configuration platforms, and spreadsheets in one platform.
- Find anomalies, conflicts, duplicates, and gaps across every source, and keep the data continuously cleansed.
- Add application context to every asset: dependencies, usage, compatibility, and lifecycle stage.
- Confirm what scans miss with owner surveys and attestations, collected through configurable portals.
- Write corrections back to systems of record when you choose: optional, per system, opt-in, and fully audited.
- Hand the assessment straight into planning. ReadyAI recommends targets and wave groupings for your team to approve.
- Run virtualization exits with **VirtualReady**, from assessment and wave orchestration to migration status, with each wave run through Nutanix Move from the platform.
- Track servers through decommissioning with **ServerReady**. Every server, drive, and data-bearing part is accounted for from deployment to disposal.

WHAT'S INCLUDED

Ready on day one

- Connectors for systems of record, discovery tools, and configuration platforms
- Spreadsheet and unstructured data import
- Ready-made inventory and dependency reports
- Preconfigured workflows and communication templates
- Configurable portals for surveys and attestations
- Configurable dashboards and reporting
- Guardrails the organization sets: role-based access on every call, human approval before every write, and a hash-chained audit

WHERE THE ASSESSMENT FITS

The first two phases of every migration

1	2	3	4	5
Discover and assess	**Design and plan**	**Factory setup**	**Migrate in waves**	**Validate and close out**
ReadyAI analyzes, your team validates	ReadyAI recommends and plans, your team approves	Delivery team	Delivery team	Delivery team and application owners

Highlighted: the phases this assessment covers. A named delivery team executes the rest, with your sign-off at every phase.

Global partners and Fortune 100 customers use ReadyWorks to take months and millions out of infrastructure work.

Delivered with the partners you trust.
